Wings and Wishbones. Scientists call the "wishbone" the furcula, and it is the union of what are in man two collar bones.

Few of us appreciate the strength of the stroke of the bird's wing. A scientist has been known to break a wing by a blow of his wing, and in like manner the wing beatings of the larger birds are dangerous if they strike the human head or face.

For this reason we find in the eagle and birds of its class that turn quickly a curve that is a perfect Roman arch, widely at variance with the Gothic arch, which is the shape of the "wishbone" of our common fowls.

How Some of Them Are Named. In "Black-Beet Tales of Glacier National Park" J. W. Schultz says that a visitor at his camp told this story about the simple but absurd way in which names are often selected:

A government employer was at Gun-sight pass, one of the most weirdly beautiful places in this whole country, putting up a tablet on which were painted arrows that pointed to the different mountains, the name of each peak alongside its particular arrow.

Florida's Curious Spring. Within a few miles of salt water, at a point not far from Tampa bay, Florida, there is an immense spring, which has formed a pool perhaps 100 yards wide and of great depth. At times the waters of this pool lie clear as the summer air, gradually deepening into the green shadows of its mysterious depths.

You Can't Find Them. They used to walk through the Scotch cemeteries on the Sabbath by way of maintaining the proper rigorous mental attitude. Sandy MacTosh, who had never been suspected of brilliance of thought, returned home from one of these Sunday excursions and said, "Feyther, I took a bit walk about 'th' cemetery 'th' day, an' I readit a 'th' inscriptions on 'th' tombstones."

Something Coming to Him. "How old are you?" asked the judge of a prisoner who was under arrest for stealing. "I dunno." "When were you born?" "What's the use of my telling you about my birthday? You ain't going to make me a birthday present, are you?" -Pittsburgh Chronicle-Telegraph.

PLANS FOR 60,000 TON BATTLESHIP

Naval Officer Urges Building of Enormous Fighting Craft.

WOULD BE 995 FEET LONG

Panama Canal Alone Places Limit on Size of Warships We Should Build, Says Commander Moffet—Would Carry Huge Guns and Be Very Steady at Sea.

No subject to be taken up by the next congress, with the exception of the tariff, will be watched with greater interest than the attempt of certain patriots to lead the United States into building a behemoth battleship bigger than anything dreamed of before.

At the last session of congress Senator B. R. Tillman introduced a resolution to the effect that the committee on naval affairs be instructed to investigate just how big a man-of-war could be built.

Senator Tillman had inserted in the senate documents the plan for a colossal ship as made up by Commander Moffet of the United States navy.

Commander W. A. Moffet is in charge of the United States Naval Training Academy at Lake Bluff, Ill., and it was at that place that he formulated these daring and already famous plans which have won the support of so many naval experts and excited such widespread popular and technical interest.

Tonnage Steadily Increasing. Under the bold title "Build the Limit" his project is outlined in Sea Power of recent date. His article says in part: "The history of modern battleship construction shows that its displacement has steadily increased.

"Why not take a lesson from history and frankly decide what we want, what characteristics a battleship should have, what speed, endurance, battery, armor, etc., it should have, and then build it regardless of displacement?"

Canal Limits Size. "The limit for us in the size of battleships is the Panama canal locks. It is also the limit for any power that might go to war against us, for none would sacrifice the advantage of being able to send its feet through the canal.

"Our great but seldom mentioned advantage of the large ship as compared with the smaller is practical position as a gun platform, especially at high speed and in a rough sea. At eighteen knots in a moderate sea the 16,000 ton ship can hardly fire her turret guns, and she rolls and pitches to such an extent that her chances of hitting are small.

"This, the first real superdreadnaught, would have approximately the following dimensions: Length over all, feet..... 995 Beam, feet..... 105 Draft, feet..... 23 Speed, maximum, knots..... 26-28 Endurance at maximum speed, hours..... 72 Estimated horsepower..... 250,000 Total displacement, tons..... 60,000

Peace Offer Came Raged Two Years After Conflict Had and 133 Days

Germany's move for peace came just two years and 133 days after she declared war on Russia and two years and 129 days after England declared war on Germany.

SELLS RAILROAD TO THE ALLIES

Iowa Line All Boxed Up and Ready to Ship.

BRIDGES GOING ALONG TOO

Everything the Road Owns, Including Rolling Stock and Ties, Will Be Put on Ships and Carried Across the Ocean to Be Relaid Behind Firing Lines.

When Great Britain appealed recently to Canada for supplies of railway rails to be laid behind the firing lines in France the Canadian railway companies undertook to supply 1,000 miles of track, but according to the announcement of Herman Sonken to the National Association of Waste Material Dealers, which recently met in New York, it remained for the United States to conceive the shipment of a whole railroad, tracks, switches, bridges, locomotives and cars.

Mr. Sonken's road is frequently known as the "Can," and the president is quite ready to acknowledge this is a fair designation. In fact, its name is about the biggest thing about his road. It is 35.3 miles long and has three locomotives, two combination passenger and baggage cars and six freight cars. It once had ten freight cars, but the four others sort of petered out.

"Big" Year for the Road. The road was chartered under the laws of Iowa in 1903 to run from Anamosa to Quasqueton and to connect with the Chicago and Northwestern railway, the Chicago, Milwaukee and St. Paul and the Illinois Central. Once it made as much as \$5,508 in one year. That was in 1910, but several passengers quit riding regularly, and the profits fell off.

A Durable Whitewash. The Way to Mix It Properly Described in Full. Whitewash is so commonly used around the farm that it is advisable to know just how to make it properly.

Thieves Steal Gates; Tie Up Water System. Robbers Go Into New York Aqueduct Tunnel and Carry Off Big Bronze. Participation in the benefits of the new Catskill aqueduct in New York may be delayed at least a month in the case of Brooklyn unless the person who burgled the aqueduct shaft is caught and made to give back the heavy bronze water gates and bronze operating lever so necessary in operating the system.

Value of Rye. Rye will thrive on acid or poor soils where wheat will not grow well and may be planted on any soil later than wheat. It makes one of the earliest spring pastures and is excellent as a green manure.

Pasturing Corn. The pasturing of corn is especially applicable to semiarid regions. The dry soil is not injured by the animals, and very little corn goes to waste or spoils by coming in contact with the soil.

Cut Trees in Winter. Tree cutting should be done in winter. Timber dries slowly at this time of year, and there is little damage from season checking.

Peace Offer Came Raged Two Years After Conflict Had and 133 Days. allies—All of northeastern Armenia and part of Mesopotamia. Bulgarian territory taken by the allies—None. Entente territory occupied by the German allies—Northern France, practically all of Belgium, Poland and Lithuania, more than half of Roumania, all of Serbia and Montenegro and nearly all of Albania.

THE FARM INVENTORY.

Winter is the idle time on many farms, so why not take that farm inventory the first of the year and keep farm records for 1917? There are some very simple and excellent farm account books. A full account of receipts and expenditures is valuable, and a balance between these and the depreciation of stock, etc., is the only way to know whether the business is paying or not.

WINTER RHUBARB IN CELLAR

May Be Easily Forced Indoors For Home Table. Rhubarb may easily and cheaply be forced indoors in winter for the home table, and the crisp, delicious stalks are a welcome visitor at the home in the form of pie or sauce.

A DURABLE WHITEWASH. The Way to Mix It Properly Described in Full. Whitewash is so commonly used around the farm that it is advisable to know just how to make it properly.

Robbers Go Into New York Aqueduct Tunnel and Carry Off Big Bronze. Scientific Farming

SELECTING ALFALFA SEED.

Variety, Source, Purity and Vitality Should All Be Considered. [Prepared by United States department of agriculture.] The following suggestions for selecting alfalfa seed for use by farmers east of the ninety-fifth meridian are made by H. L. Westover, scientific assistant of forage crop investigations, and H. B. Hendrick, assistant in agricultural education, states relations service.

percentage of the alfalfa grown in the United States is ordinary alfalfa. Where alfalfa has been grown under certain conditions for a considerable time there is a tendency through elimination to produce a type presumably best adapted to the conditions under which it was developed.

More Defects. "His digestive organs have been given too many new and arduous duties. Under exertion he is short winded, due to lack of exercise or a bad heart. He is designed as an erect outdoor animal, with feet and legs for service, but he not only lies down by night, but he sits down by day. His 400 muscles are virtually all soft and weak from lack of use. He never walks when he can ride.

Abandon Celebration. Dexter, Mr., has given to charity the money which it had voted to use for an elaborate celebration. He had been informed by a physician that he should not have a party.

Who? Why, Mr. American! For Further Information as to His Shortcomings Read What E. E. Rittenhouse Has to Say About Him. Then Help Him Mend His Ways So That He May Live Longer.

Tells Us What We Are. The most frank of all the speakers was E. E. Rittenhouse, commissioner of public service and conservation of the Equitable Life Assurance society, who dissected Mr. Composite Average American most searchingly in a paper on "The Relationship of Life Insurance to National Physical Preparedness."

Wings and Wishbones. Scientists call the "wishbone" the furcula, and it is the union of what are in man two collar bones. These receive the thrust of the strokes of the wing that turn the creature in its flight.

Florida's Curious Spring. Within a few miles of salt water, at a point not far from Tampa bay, Florida, there is an immense spring, which has formed a pool perhaps 100 yards wide and of great depth. At times the waters of this pool lie clear as the summer air, gradually deepening into the green shadows of its mysterious depths.

HE EATS AND LOLLS HIMSELF TO DEATH

He Rushes, He Drinks Too Much, and He's Flabby.

WHO? WHY, MR. AMERICAN!

For Further Information as to His Shortcomings Read What E. E. Rittenhouse Has to Say About Him. Then Help Him Mend His Ways So That He May Live Longer.

The composite average American is a physical sham, and he doesn't know it. He is trying to crowd two lifetimes into one. He feeds on a lot of tasty junk and seriously overstrains his heart, arteries, kidneys, nerves and digestion.

All of which and a great many other facts were told recently at the tenth anniversary convention of the Association of Life Insurance Presidents in New York city, where executives representing about 90 per cent of the \$24,000,000,000 old line insurance in force in the United States gathered for a discussion of business, patriotism, economic preparedness and other nationally vital topics of the day more or less directly related to life insurance.

"A marvelous increase has occurred," he said, "in wealth, in time saving and labor saving devices which have radically changed the living habits of a vast number of people. Physical exertion has materially declined, while the per capita intake of food has increased, much of it over-rich and injurious.

"It is amazingly prosperous. In two generations his health has increased 540 per cent. He looks smooth, pink and healthy. He is a good liver. He hurries. He has no time to waste. The age at death of the American people is about forty-three. His hair is aged, and he is getting bald. Nature asks why haste protection is needed indoors. His eyes have been strained by close focus and inside work, hence the eyeglasses. His teeth put up a good front, but they need attention.

"He would not think of mixing bricks or scrap iron or gravel with the fuel for the furnace, but he does not hesitate to follow this plan in furnishing fuel for his body. He seems to think 'auto intoxication' is some automatic way of getting pleasure. He should note the insurance records, which show that, with those above forty years old, having fifteen to eighty pounds overweight, the excess death rate ranges from 9 to 75 per cent above the average.

"He harbors the erroneous impression that our gain in conserving life has overcome all adverse conditions. He points to a decline in the general death rate and says our vitality therefore must be gaining. The decline, instead of indicating an increase in the strength and sturdiness, simply shows that we have learned how to avoid certain enemies, as we would step around a dangerous beast chained in the street. An abnormal increase has occurred in the death rate from disease due directly to life strain, the direct results of the heavy burden of exercise put upon the vital organs of the body."

Abandon Celebration. Dexter, Mr., has given to charity the money which it had voted to use for an elaborate celebration. He had been informed by a physician that he should not have a party.

Farmers' Week at Cornell.

Red lines around the dates Feb. 12-17 on many a new year's calendar; especial preparation by the whole staff of the college of agriculture at Cornell; special rates on the railroads; an army—a family army—planning to capture more facts about better farming and better farm homes—this, it is stated, leads up to the week that is to belong to the farmers of New York—"Farmers' Week at Cornell."

There will be lectures, exhibits and practical demonstrations on various farm subjects such as potato-growing, poultry raising, dairying, forestry, home-making, farm management, insect control, vegetable gardening and flower growing. Rural schools, churches and community organizations will also come in for a large share of attention. There will be a number of conventions or conferences of societies which deal with agriculture and allied interests. Among others there will be meetings of the state drainage convention, floral club federations, home makers' conference, and a vegetable growers' association.

There will be entertainments and social gatherings; speaking contests for the agricultural students; illustrated lectures, concerts and an organ recital on the pipe organ in the auditorium. Through all this varied program the main purpose of the farmers' week conferences is announced to be that of exchanging first-hand personal knowledge and experience for the improvement of farming and the betterment of rural conditions.

The Better the Printing

of your stationery the better the impression it will create. Moral: Have your printing done here.

Special Notices.

FOR SALE—25 Plymouth Rock pullets. Inquire of Dottie Cummings, King Ferry. 24w2

FOR SALE—Brown mare chunk, about 1,000; sound, kind and true double and single; safe for lady; winter price. C. I. Swayze, Near Belltown. Ludlowville, N. Y. Miller phone. 24w2

Save feed, prevent disease among horses and cattle with Pratt's Animal Regulator. All Pratt preparations are guaranteed to please. J. S. Banker, Genoa.

Skunks, \$4.00, \$3.00, \$1.75, 75c. Rats, 40c straight. Write or phone Bell 21Y21.

Wilbur Bros. & Starrow, King Ferry, N. Y. 24tf

I have at my place eight books, six of them written by my nephew, G. A. Kratzer, and two by his wife. These books are on the subject of Christian Science. Their titles are: The Universal Gospel, What Is Truth, Complete in Him, Cause and Cure of War, Dominion Within, Individual Completeness, Revelation Interpreted and Spiritual Man. Three of these are pamphlets with heavy paper covers. Their prices range from 20 cents to \$5 according to binding. If any one wishes to see or buy any of these books they can do so by calling at my place any time. This notice may not appear again. Chas. Kratzer, Atwater, N. Y. 23w2

Save feed, prevent disease among horses and cattle with Pratt's Animal Regulator. J. S. Banker, Genoa.

EAT HONEY—and lower the high cost of living. Geo. L. Ferris has some yet. 22w3

FOR SALE, or will exchange for colt, a good work or road mare 12 years old. Harry S. Ferris, 21tf Atwater, N. Y.

FOR SERVICE—A pure bred Cheshire boar, \$1.00. S. W. Morgan, 15tf Poplar Ridge.

72 acre farm at a bargain. Known as the John Miller farm and occupied by Fred Storms, in town of Venice, Cayuga County, N. Y. Other good bargains. C. G. Parker, 14tf Moravia, N. Y.

Cash paid for poultry delivered every Tuesday. We want your old rubber, beef and horse hides, deacon skins. Weaver & Brogan, Genoa. 14tf

FOR SALE—1 and 1/2 bu. peach baskets, grape baskets, grape trays, pear bags and barrels, potato crates, etc. King Ferry Mill Co., 3ct King Ferry, N. Y.

WANTED—Dressed pork, veal calves, fat sheep and lambs, fat cattle and all kinds of poultry. Highest cash price paid. Cash paid for hides. Phone 3-Y-3. H. A. Ellison, 14tf King Ferry, N. Y.

The War Mother

She is listening for the voices that forever may be dumb; She is waiting for a vision that perhaps will never come.

In her heart a memory fades— Ah, these frightful, ghastly shades! In her eyes the smoke of carnage, in her ears the thundering drum!

She is yearning for the brightness of tomorrow's morning sky, And she pictures a reunion when the long, dark night is by.

In her gaze a face appears, Oh, the blinding mist of tears! And yet ever, sharply shrilling, comes the bugle's blatant cry!

She is dreaming of his valor—mother love is ever bold; Boots and spurs and muddy khaki lighted by the gleam of gold.

In her soul hope shines anew— They must live! Her sons, so true! Hark! The booming of the cannon turns her heart's blood deathly cold!

She is listening for voices that she loves so well, so well, And she's watching for the loved ones while the brazen moments tell.

In her heart pride's fire aglow— Then the chilling breath of foe, And forever, shrieking, shrieking, the loud screaming of a foe!

—Lurana Sheldon in New York Times.

GERMAN PRAISE FOR AVIATORS OF ALLIES

Cruise With Great Coolness In Midst of Fire and Very Near Ground.

A recent issue of the Neueste Nachrichten of Kiel, Germany, gives a description of the allies' air service by a Rhinelander. "The gigantic number of enemy aviators," states our German contemporary, "exceeded anything seen or experienced in this war. By 3:30 a. m. they were already flying, and they cruised with the greatest coolness in the midst of our fire. They fly so low that we can make out the smallest maneuvers with the naked eye. Their aviators carry out precise time maneuvers and are indifferent to all dangers. They even shoot at us in our holes and trenches with machine-guns, and when they want to find our bombproofs they come down still lower until actually within pistol shot. Many of them have been shot down, and when their photographs have been developed we have been able to distinguish the entrances to our shelters. "Their artillery has much to thank them for. As a rule young English lads of from eighteen to twenty years of age, quite little fellows, sit in the French machines. When they threw down that wreath for poor Immanuel they did it right over one of our batteries. Then they were off again, and five minutes later that battery was under such fire that it had to change position mighty quick. They are frightfully cheeky, these aviators, and as they usually fly six together it makes no difference if one or the other is lost."

WAR MAKES BRAYLESS MULE.

French Veterinarians Prevent Their Voices Reaching Enemy.

The brayless mule is one of the scientific developments of the war. Large numbers of mules have been imported into France from America for use at the front, but their habit of braying at inconvenient moments had to be remedied before they could be used to the best advantage.

The veterinary experts were called in, and after a little experiment they discovered that a slight operation on the nostril had the desired effect. All the mules sent to the front are now made mute by this process.

MEATLESS DAYS FOR ENGLAND

Order Issued to Limit Dinners to Three Courses.

The London board of trade under the defense of the realm act issued an order to the effect that beginning Dec. 18 no meal exceeding three courses between 6 p. m. and 9:30 p. m. or two courses at any other time may be served in any hotel, restaurant or public place.

The announcement added that it is proposed to issue another order at an early date forbidding both in public places and private houses the consumption on certain days of meat, poultry and game.

BUFFALO MEAT FOR WILSON.

Yearling Killed in First Texas Hunt in Many Years.

A fat yearling buffalo killed by hunters in the first buffalo hunt held in the Texas Panhandle in many years was dressed at Amarillo, Tex., and a large piece sent to President Wilson.

Others who received choice cuts are Ambassador Jesse and of France, Secretary of the Treasury W. G. McAdoo and the four members of the federal farm loan board.

Oklahoma's Indian Lawmaker.

In addition to Senator Robert L. Owen, a Cherokee Indian, the Cherokees have aided to their prestige by sending two of their nation to the lower house of congress.—T. A. Chandler was chosen in the First and William Hastings re-elected in the Fourth district of Oklahoma. Charles Carter, representative from the Third Oklahoma district, is a Chickasha Indian, but connected with the Cherokees by ties of marriage.

SUFFRAGE BILL EXPECTED SOON

All Parties Now Recommend New York State Measure For 1917.

With the indorsement of all the National political parties and backed by both the Democratic and Republican State organizations, the friends of woman suffrage are looking forward to an early consideration of the suffrage bill in the New York State Legislature, the passage of which this year, in conjunction with the favorable action by the 1916 session, will make it possible for the citizens of New York State to vote for woman suffrage on November 6, 1917.

Little Opposition. In view of the strong indorsement given woman suffrage by all the parties, little or no opposition is expected by suffrage workers in the Legislative Session of 1917. The attitude of both the Democratic and the Republican State organizations is made plain by the planks in the respective state platforms. Referring to the resolution presented by the New York State Woman Suffrage Party, the Republican plank reads: "We favor the adoption of this resolution by the next Legislature, thus insuring the resubmission of the suffrage amendment at the 1917 election." The plank of the Democratic State platform reads: "We have repeatedly recommended that the opportunity be afforded the people of this State to vote upon the question of woman suffrage, and we again recommend that the question of suffrage to women be submitted in 1917."

National Parties Favorable.

Even stronger is the indorsement given by the National parties, all of which for the first time in the history of the United States have gone on record in favor of extending suffrage to women. The Republican party favors the extension of the suffrage to women "as a measure of justice to one-half the adult people of this country." The extension of the franchise to women by States should be given, according to the National Democratic suffrage plank, "upon the same terms as men." "Unrestricted and equal suffrage for men and women," is the plank adopted by the Socialist party. According to the Prohibition suffrage plank, "The right of citizens of the United States to vote should not be denied or abridged by the United States or by any State on account of sex." In the words of the Progressive Party, "The women of the country, who share with men the burdens of government in time of peace and make equal sacrifice in time of war, should be given the full political right of suffrage."

FORMER SENATOR PLEDGES COMMITTEE

John B. Rose Declares For Women's Suffrage.

Republican County support is promised the cause of suffrage in the forthcoming November election by former State Senator John B. Rose, Chairman of the Orange County Republican Committee, who until recently has been counted among those opposed to woman suffrage. At a recent mass meeting held in Newburgh former Senator Rose took occasion to announce himself in favor of woman suffrage. As presiding officer for the meeting he said:

NEW YORK A PIONEER IN SUFFRAGE WORK

At this time, when the Woman Suffrage Amendment is before the Legislature, it is interesting to note that the women of New York State were the first in the Union to ask for equal suffrage. The first Woman's Rights Convention was held at Seneca Falls, July 19-20, 1848, for the purpose of discussing the rights of women.

Since that time the women of New York State have worked steadily for the cause of suffrage, and it was through their efforts the first society was formed for this purpose and the first legislative attempts made to secure civil and political rights.

In the meantime twelve other states have obtained suffrage—Wyoming, Colorado, Idaho, Utah, Washington, California, Arizona, Kansas, Oregon, Illinois, Montana and Nevada.
